

NEMACITE

TRADE NAME : Nemacite™
TYPE OF PRODUCT : Biological Insecticide
ACTIVE INGREDIENT : *Steinernema carpocapsae* 40 million/100 gm
INERT INGREDIENT : Attapulgate clay
COLOR & ODOR : Brown, specific odor
FORMULATION : Mash powder

TOXICITY : LD₅₀ oral (rat) > 21,500 mg/kg
LD₅₀ dermal (rat) > 2,000 mg/kg

ENVIRONMENTAL IMPACT : Non toxic to fish, bee, and birds.

USE : For controlling of most lepidopterous larvae.

RATE OF USE : One package per 20 litres of water by putting the contents of the package into a bucket half-fill with water (20-25°C) and stir to break up any lump. Transfer through a fine filter into a spray tank, add a small amount of wetting agent and adjust to the final volume then spray to cover all plant parts. Repeat application within 3-10 days. Best results will occur when spray the nematode right after watering the plants.

STORAGE : Keep in a refrigerated temperature between 7-10°C.

SHELF LIFE : Approximately 6 months at 7-10°C.
